A SAFE LIFE company

SAFE LIFE

SUPPLY – INSTALLATION – MAINTENANCE

EDITORIAL

Health isn't only a private matter. We spend a third of our time at our workplace whether in an office or outdoors so it is a central part of everyone's life. Occupational health and safety are therefore essential to every employee's well-being. We decided to make it our mission!

D-SÉCURITÉ GROUPE is, above all, a French family-owned group. A market leader in defibrillators and HEPA air purifiers since 2007, our commitment to bringing greater safety to the workplace (and beyond) continues to grow. Our customers' satisfaction and peace of mind are our constant priority. Our development strategy is built on the quality of our services and on equipment that remains at the cutting edge of technology.

To expand our offering, we launched D-SÉCURITÉ FORMATION and D-SÉCURITÉ INCENDIE, essential links in the chain of survival.

Do you have a project and want to see it through?
We are committed to supporting you all the way to completion. All our teams stand by your side to help you with prevention and to improve your risk management in occupational health and safety.

A WORD FROM THE MANAGING DIRECTOR

Every day, many people witness dramatic situations when someone suffers a cardiac emergency.Because saving lives is not something that can be improvised, we needed to professionalize our approach and methodology. With this in mind,

in 2007, Défibrillateur France, the first company specializing in the marketing of Automated External Defibrillators (AEDs), was created, with the ambition of making their use accessible to as many people as possible.

Very quickly, it became essential to add complementary services such as maintenance and training the general public in the use of these devices.

Since then, our company has established itself as a leader and key reference in this market, and we are proud to have contributed to the development of the laws, decrees and standards that now govern the sector in France.

In 2017, an OMS study revealed that air pollution accounted for 14% of deaths in Europe, and for many occupational illnesses.

Aware early on of the importance of this public health issue, we decided to develop the RECYCL'R activity, specializing in indoor air quality (IAQ) audits and the sale of professional HEPA air purifiers.

COMMITMENTS AND CERTIFICATIONS

Our ambition has always been to offer reliable products and high-quality services, ensuring the optimal operation of equipment. This is why our company has been ISO 9001 and ISO 13485 certified since 2014.
We are also accredited by EcoVadis, Soluti and Provigis, reflecting a demanding environmental and social policy and a strong commitment to reducing our environmental impact.
Today, our expertise and know-how have already earned the trust of more than 19,000 clients across France.

OUR VALUES AND OUR VISION

Driven by values of loyalty, integrity and professionalism, we are committed to building a strong, skilled team that shares these principles.
This is what enables us to guarantee the excellence of our products and the quality of our services.
In a constantly evolving occupational health and safety market—shaped by new regulatory requirements and rapid technological progress we are committed to continuously offering new products and services to support our clients' compliance and operational performance.

Notre ambition

With this global vision, D-SÉCURITÉ GROUPE aims to establish itself as the essential partner in occupational health and safety.
This high standard and passion explain why, every day, new clients place their trust in us—and why we chose to join the world leader in defibrillator distribution, Safe Life, so that together we can save even more lives.

Frédéric TRIDON - Managing Director

OUR GROUP

The values of our group are based on 4 axes :

- **Operational excellence**
- **Integrity and transparency**
- **Advice and professionalism**
- **Reactivity and proximity**

At D-SECURITE GROUPE, we offer a complete range of safety solutions through our brands Defibrillateur-France, D-Securite Incendie, D-Securite Formation, Fournitures Medicales et Recycl'R.

We intervene in the total process of management of your equipment : supply of the best products, installation, annual physical maintenance certified on all brands and training (to discover in the catalogue) ranging from the use of a defibrillator, to the workplace first-aider training for any size of company.

We also offer a wide range of electrodes (adults, children) and batteries for all brands of defibrillators as well as a range of emergency kits, medicine cabinets, air purifiers, filters and various accessories.

We offer packs for purchase and rental for defibrillators as air purifiers to fit your budget.
Trust us for your health and safety at work projects, we will give you our expertise to advise and equip you in the best way.

Our technical and quality teams are composed of specialized, trained and certified professionals.

GLOBAL **SERVICES**

CSR POLICY
DSG

D-SÉCURITE GROUPE, is a French family group leader in the market of défibrillator and air purifier since 2007 for which the satisfaction of its customers is a priority at all times.

Our development strategy is based on the quality of our services and our equipment always at cutting edge of technology.

Our mission "Saving lives"

As part of this mission, D-Sécurité Groupe is determined to carry out its activities taking into account the social, environmental, and economic impact. Our Corporate Social Responsibility (CSR) policy defines our commitments to sustainability, transparency, and ethics in all of our activities.

RSE REPORT
2024-2025

Our CSR approach is based on the following 6 axes :

- **Reducing our carbon footprint**
- **Respect for ethical practices**
- **Diversity and anti-discrimination**
- **The health and well-being of employees**
- **Sorting and recovery of waste**
- **Anticipate and take into account customer and consumer expectations**

These are the basics of our CSR actions. Being certified ISO 13485 (quality management systems for the medical device industry) and QUALIOPI (quality management system for training activities), our CSR approach is also of our continuous improvement efforts.

Le 18/03/2024

The Managing Director : Jérôme SOMMET

SAVING LIVES,

our daily **commitment** since 2007!

32,000
Defibrillators under maintenance

1,328
Lives saved

62,500
People trained

Since 2007, we have been taking action every day to protect and save lives.

WHY IS THIS ESSENTIAL?

50,000 people die suddenly from cardiac arrest every year in France.
Cardiac arrest can happen to anyone, at any time and at any age.
By acting before emergency services arrive, using a defibrillator and performing chest compressions,you can change the course of events.

TRAIN + EQUIP = SAVE LIVES

Every life saved gives meaning to our commitment.

D-SÉCURITÉ GROUPE
GLOBAL SERVICES

OUR QUALITY POLICY

Our ambition is to drive D-SECURITE GROUPE towards excellence, through profitable growth in all of our activities, by building customer loyalty and conquering new markets.

Awareness of quality issues reveals the presence of a real threat to the life of the company and offers an opportunity that is the obligation to reduce non-quality costs in order to survive.

This policy aims to constantly improve the quality of products, services and use of human and material resources. These achievements are possible thanks to dynamic, organized, united teams and by developing the talents of all, in the service of the company's performance and for the satisfaction of the commitments made to our customers

The policy we conduct in this context is based on five axes :

1. Increase customer satisfaction by providing quality equipment and related services while relying on our partners (financial and suppliers).
2. Ensure safety and working conditions for staff, improve working conditions by providing new tools and resources.
3. Remain efficient : develop profitability to ensure the resources of our policy.
4. Strengthen our professionalism by complying with regulatory and legal requirements to improve the quality of service.
5. Research and/or develop new products, in partnership with our suppliers and customers.

To answer this question, we will develop a company approach based on :

- Customers listening and communication.
- Improving the performance of work tools and services.
- Management through the process that engages each step workstation continuous and environmental improvement.
- The necessary actions will be carried out using ISO9001, ISO13485 standards as well the applicable regulatory and legal requirements.

We are aware that this requires real involvement and leads to a change in the company culture, that all this upsets habits, changes behaviors, but the responsibility of each ensures the continuous improvement of our quality management system. The involvement of everyone is the key to our success.

NOS CERTIFICATIONS

D-SÉCURITÉ GROUPE has been certified for over 10 years. This certification has established itself in France and worldwide as a benchmark for the major challenges facing organizations. D-SÉCURITÉ GROUPE holds five certifications.

ISO 9001.

This standard sets out the requirements for the implementation of a quality management system (QMS) for organizations that wish to continuously improve their customer satisfaction and provide compliant products and services.

ISO 13485.

ISO 13485 specifies the requirements of quality management systems (QMS) for the medical device industry. It is based on the requirements of the more general ISO9001 : 2000 standard, in the context of this industry.

Sales representatives

Certified technicians

Our team of sales and technical staff

At D-SECURITE GROUPE, our strength lies in the expertise and dedication of our team. Specialists in occupational health and safety, we have a national network of passionate and experienced technicians and sales representatives dedicated to offering tailor-made solutions to ensure the safety of your workplace.

More than 15 technicians spread over the territory, are trained to the most stringent standards and are equipped with the latest technology maintenance devices.

Our sales team plays a crucial role in building a relationship of trust with our customers. It is a team of more than 12 people at your service, ready to advise you by phone or directly on your site, anywhere in France. It will establish with you a privileged relationship with reactivity and reliability.

A sales team available and at your disposal at **+33 4 78 200 278**

And a 24/24 and 7/7 telephone assistant at **+33 821 819 840** (free).

DÉFIBRILLATEUR FRANCE
www.defibrillateur-france.com

« In the event of cardiac arrest, prompt intervention is crucial. **External automated defibrillators (AEDs) have become essential** for the timely treatment of victims, whether in public places, businesses or citizens.

Defibrillateur France, **a major national player since 2007, ISO 9001 and 13485 certified**, offers high quality solutions for t**he safety and well-being of all**. The company offers products and services adapted to all needs, in terms of technology, modularity, know-how and price, with all-inclusive packages for rent for less than 1 euro per day.

We have selected **a range of defibrillators and cabinets**, ergonomic and intuitive, for quick use, simple and compliant with the standards in force. These products ensure safe and efficient use, with extensive warranties and high quality customer support.
By choosing the products of Defibrillateur-France, you choose a partner offering **you supply, installation, training and maintenance on site**, according to strict protocols. We cover all your needs in defibrillators, accessories and consumables, for an all-inclusive service and optimal satisfaction.

So you too trust us that together we can continue to save lives. »

Nicolas COSNIER - Regional Manager, Île-de-France / Grand Est

Défibrillateur-France.com defibrillateur_france Défibrillateur France

FRENCH LEADER IN THE MULTIBRAND DEFIBRILLATOR SECTOR

S UMMARY

1 OW TO CHOOSE YOUR DEFIBRILLATOR ?

2 DEFIBRILLATORS MAINTENANCE

3 OUR DEFIBRILLATORS RANGE AND ACCESSORIES

4 OUR DEFIBRILLATORS CABINETS

HOW TO CHOOSE YOUR DEFIBRILLATOR ?

An Automated External Defibrillator (AED) can be either :

- **Fully automatic defibrillator (AED) :** Device that delivers an electric shock directly without user intervention when it detects the need for it.
- **A semi-automatic defibrillator (AED) :** Device requiring user intervention to initiate an electrical shock fter indicating that is necessary.

The following criteria should be considered when choosing a defibrillator model :

1
Quality manufacturer
Choose a manufacturer specialized in medical equipment with CE marking.

2
After-sales service in France and Europe
Choose a service in France or Europe for quick repairs.

3
Global cost
Consider purchase, maintenance and consumables costs.

4
Target audience
Automated devices for the general public semi-automatic for professionals.

5
Weight
Choose a lightweight devis for easy transport.

6
Protection rating
Choose a device with high IP to resist water, dust and shock.

7
Insurance occupational risks
Make sur that your maintenance company has a professional liability insurance.

8
Certified Maintenance
Choose a Supplier that offers maintenance by qualified technicians.

9
Date software
Ensure that you have software to transmit medical data.

10
Temperature range
Select a defibibrillator That can handle large temperature variations.

MAKE SURE MAINTENANCE AND INSTALLATION ARE CARRIED OUT BY AN ISO 13485-CERTIFIED COMPANY.

TOTAL COST OF ACQUISITION AND USE

It is essential to pay close attention, when purchasing a defibrillator, to the component "cost of consumables".
The technologies and usage parameters sometimes vary greatly from one device to another, in some cases involving **considerable consumables costs,** despite a nominal acquisition value that is initially rather «cheap».

A calculation must be made as soon as the project for the acquisition of a defibrillator is implemented, including the cost data of consumables.

For example, the HEARTSINE SAMARITAN PAD device has a considerable cost advantage, as **it is up to 5 times cheaper** in consumables than its most expensive competitor on this variable. These data must therefore be taken into account before the purchase of a defibrillator.

In addition to the cost of consumables, there is another variable, that of the sometimes crossed deadlines of change in these elements.
Indeed, on some devices, such as HEARTSINE SAMARITAN PAD, the consumable is unique and can only be changed once every 48 months. On other devices, it will be necessary to change the electrodes every 2 years, the battery every 4 years, and finally a specific internal consumable every 6 years. Management becomes more complicated and so does monitoring.

Some devices such as the SMARTY SAVER have a mixed adult/ child electrode, **reducing the number of consumable change operations.**

The consumables of defibrillators are therefore an important subject that the operator must not evade, in order to avoid potential short-term financial setbacks, as well as management complexities that are unanticipated and time consuming.

PROFESSIONAL LIABILITY INSURANCE

BE CAREFUL, DEMAND AN INSURED SERVICE PROVIDER

Your defibrillator must be serviced:

Defibrillators are subject to a maintenance obligation according to article R5212-25 to 28 of the Code de la santé publique, and it is the responsibility of the operation to comply with the regulations in force.

In case of defibrillator malfunction and investigation, the responsibility of both parties will be engaged: **the provider, but also the owner of the device**.

ENSURE THAT THE SERVICE COMPANY HAS A PROFESSIONAL LIABILITY INSURANCE FOR THE SALE, RENTAL AND MAINTENANCE OF MEDICAL DEVICES OR EQUIPMENT

OBLIGATION OF THE OPERATOR

Géo'DAE
BASE NATIONALE DES DÉFIBRILLATEURS

contact@geodae.sante.gouv.fr

To combat sudden death from cardiac arrest effectively, several measures have been taken in France in recent years. Among them, the obligation for institutions receiving publics (IRP) to equip themselves with AED. In parallel, the creation of a national database defibrillators installed in the IRP was implemented, it is "Geo'DAE".

What is Geo'DAE ? ?

Geo'DAE is a national database of defibrillators. It is a state brand created by the ministry of Solidarity and Health, with 4 objectives.

- Disseminate and make available the data to all to facilitate the management of the cardiac arrest
- Maintain a quality and reliable data by standardizing practices and ensuring compliance of the standard
- Enable operators to meet the legal requirement to report AED data
- Create a ripple effect and mobilize a set of initiatives to help save lives

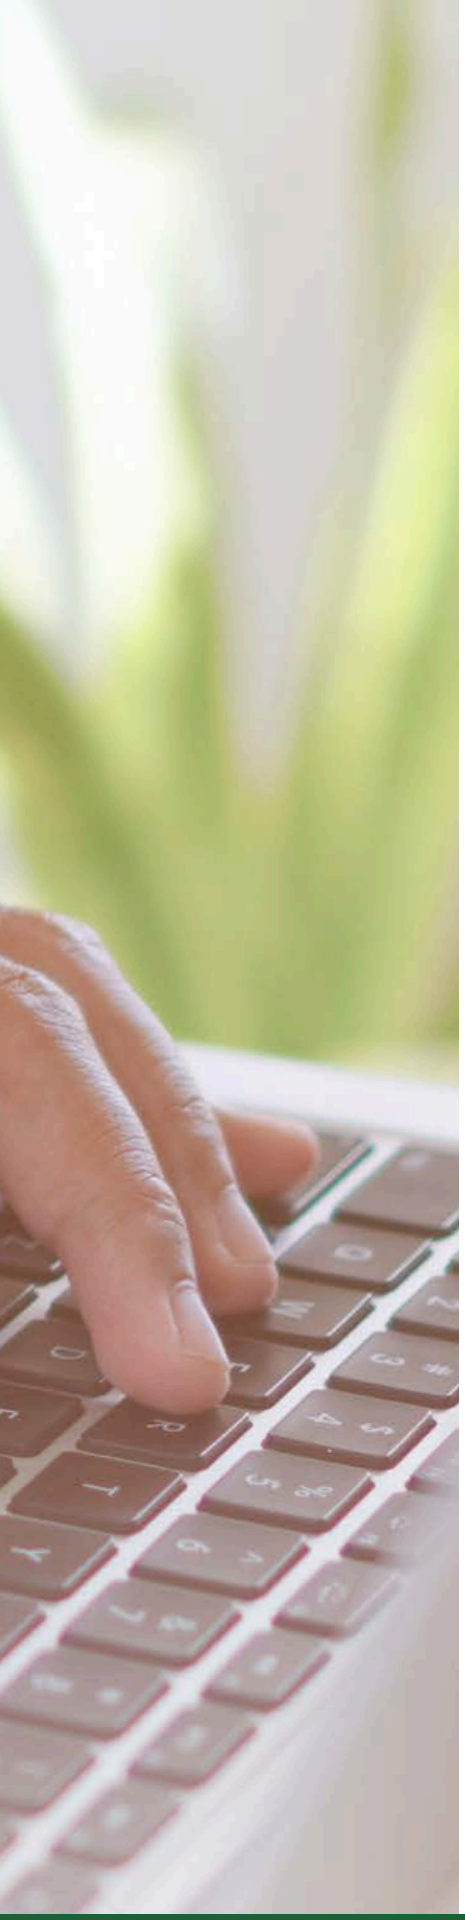

Thanks to this national base, the location of defibrillators on French territory should be improved and made faster. When firefighters, rescue teams or witnesses of a heart attack need to use an AED, they can rely on the AED to locate one near their location. This therefore involves the participation of the owners of these devices since it is their responsibility to declare them in Geo'DAE. It is quite simple to do this : simply register on the dedicated site, indicate you SIREN number and describe your defibrillator(s). Then, once the account is created, there is continuous access to the data, which allows for updating it when necessary.

Why declare your defibrillators ?

Declare your defibrillators is a legal obligation and you may be liable. This is primarily a citizen's initiative contributing to a major public health issue. Report and update information about the AEDs you have installed, is to help the emergency services and the first witness of a cardiac arrest locate an AED to use on a victim from the very first minutes, and thus contribute to saving lives.

This tool also has another benefit. Indeed, it will allow better traceability by identifying the expiration dates of consumables, the control dates and the reference in charge of follow-up. Thus, the state will be able to reduce the number of defibrillators that would not be operational in case of use.

We can do this service for you !
Write to contact@d-securite.com for further informations

MAINTENANCE
WHAT THE LAW SAYS

The maintenance of your defibrillator is mandatory.

The maintenance regulations for external automatic defibrillators (AED) involve:

- Legal obligations, with a regulatory framework defined by decrees and ordinances
- An extension of the law to include institutions receiving the public and the establishment of a national database
- The responsability of municipalities in the installation and maintenance of AEDs, with potential criminal liability.
- Specific standards and certifications, such as the AB Certification for ISO 9001 and ISO 13485
- The importance of materiovigilance to prevent incidents.
- The requirement for professional liability for defibrillator responders

The installation of AEDs in establishments receiving visitors (modulated according to category and capacity) is of considerable public health interest and therefore mandatory.

As a reminder, decree n°2018-1186 of 19 December 2018 specifies the IRPs subject to the obligation to hold an DAE, namely :

- From January 1, 2020, LES of categories 1, 2 and 3
- From January 1, 2021, CRP 4
- As of January 1, 2022, certain Category 5 LES (Old-age facilities, facilities for disabled people, care establishments, railway stations, mountain hotels and restaurants, mountain huts, enclosed and covered sports facilities as well as sports halls).

Légifrance
Le service public de la diffusion du droit

A **proposed law** could make in-person **maintenance** of your **defibrillator mandatory** >

WE CHECK **NEARLY 30 000 DEFIBRILLATORS EVERY YEAR**, AND WE KEEP A **COMPLETE RECORD** OF THE EXPIRATION AND MATERIOVIGILANCE OF YOUR DEVICES AND CONSUMABLES.

MAINTENANCE & EXPERTISE Réf. CM002

MAINTENANCE OF YOUR DEFIBRILLATORS

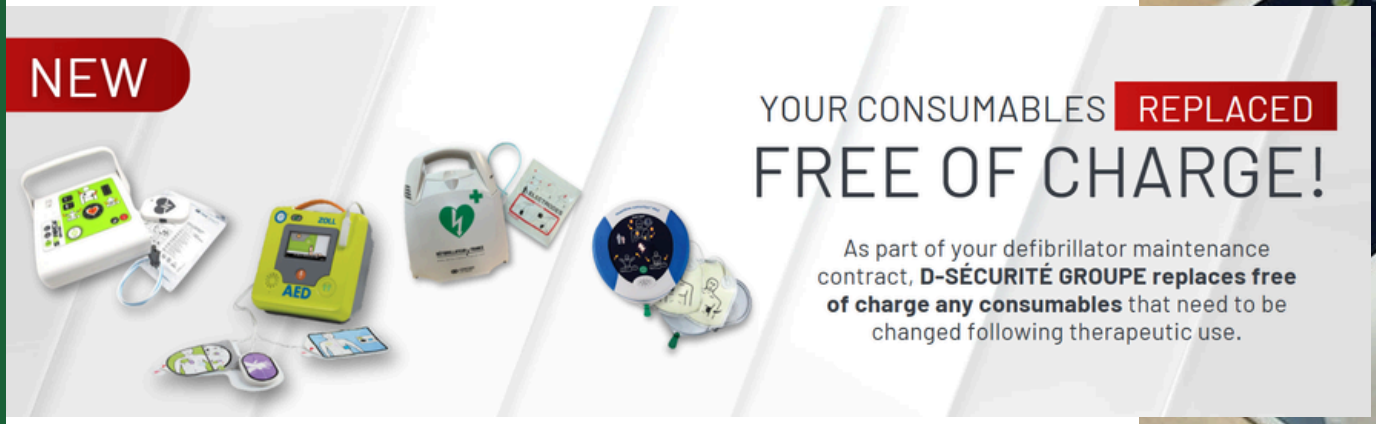

Our company offers you **maintenance and service contracts** compliance with manufacturers' recommendations and obligations

The annual physical maintenance offered by our services guarantees the proper functioning of your medical device and allows you a discharge of liability. However, it is the responsibility of the operator to make a regular visual check to see that the aircraft is always available and has not been stolen or broken between maintenance passages.

WE PROPOSE :

- Occasional maintenance and servicing.
- Contracts including many services such as 24/7/24 assistance, equipment loan in case of failure and access to the virtual (dematerialized) security register.
- Interventions on all brands and models of defibrillators and we provide consumables (electrodes and batteries).
- A paperless report of intervention submitted each year.

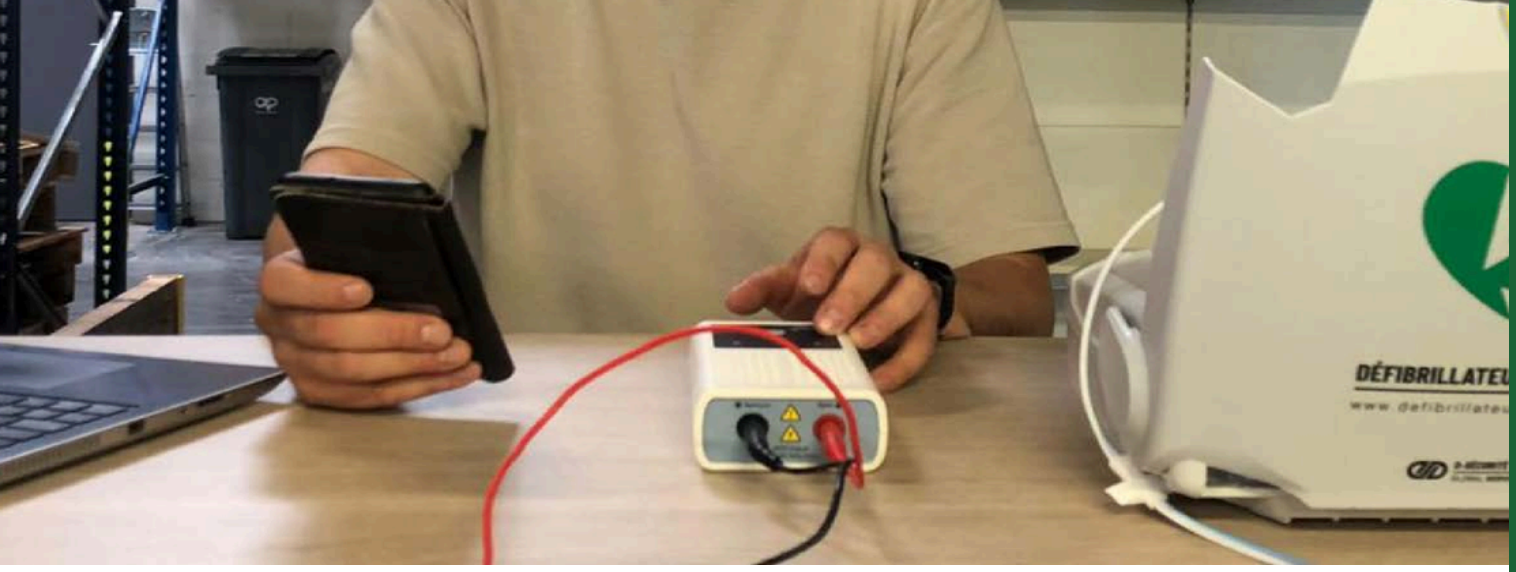

Réf.DFS200

DURING OUR MAINTENANCES :

We use a tester that is compatible with all brands of defibrillators (tests, data recovery, cloud content management system (AIMS)).
Find this product on www.testeur-defibrillateur.com

We also carry out shock tests, checking the joules delivered against the manufacturer's recommendations, retrieving the data and taking a photo of the shock waveform, to ensure the reliability and compliance of your defibrillators.

OUR 25 CHECKPOINTS DURING MAINTENANCE WITH OUR DFS200 MULTIBRAND TESTER

1 Color and flashing of the visual indicator on the device: green if it is working properly and red if it is not working properly.	**2** Color and flashing of the visual indicator on the device: green if it is working properly and red if it is not working properly.	**3** Battery (consumable) replacement if threshold values are exceeded.	**4** Voice instructions, guiding the user in the placement of electrodes.	**5** Information on the display inside for the hearing impaired, are perfectly displayed at the opening, to the start.
6 Bag of sealed electrodes. If the electrodes have been used, they should be systematically replaced.	**7** Electrodes well connected to the defibrillator.	**8** Electrode cables not showing cracks or cuts and not being pinched by overflowing under a poorly closed cover.	**9** No damage or excessive wear on accessories and the device itself.	**10** Expiration dates of consumables (electrodes, battery, emergency kit...).
11 Function of indicator lights (LED).	**12** No noise when handling the AED.	**13** No crack on the case and bag of the device.	**14** Cabinet or support (model, condition, traceability, electrical connection, alarm, heating, telephone, camera, mandatory clearance space, implantation, support...).	**15** Compliance of the AED signage elements according to the regulations.
16 Update the defibrillator software according to technical and/or regulatory developments.	**17** Error codes if any and resolution or support SAV.	**18** Reset memory after check.	**19** Summer/winter time and synchronization	**20** Cleaning and disinfection of all equipment.
21 Test of the device with our simulator/ shock absorber DFS200 (according to the manufacturer's recommendations).	**22** Good readability of traceability indications (bar code, serial numbers, lot,...).	**23** Filling in the maintenance and identification labels.	**24** Filling in the safety and maintenance register.	**25** Maintenance report is prepared.

ZOLL Powerheart G5
AUTOMATIC & SEMI-AUTOMATIC

Ref.PG5001/ PG5002

•ZOLL AED Plus :

The ZOLL AED Plus® AED, featuring Real CPR Help® technology, helps bystanders respond quickly and confidently to sudden cardiac arrest. It provides real-time audible and visual information to ensure the best possible CPR is delivered and, if necessary, delivers a shock to the victim.

•ZOLL AED 3 :

The ZOLL AED Plus® AED, featuring Real CPR Help® technology, helps bystanders respond quickly and confidently to sudden cardiac arrest. It provides real-time audible and visual information to ensure the best possible CPR is delivered and, if necessary, delivers a shock to the victim.
Its GPS location feature enables the device to be located and to track its movements in real time.

Combined with AEDTRAX: Attached directly to the AED 3, this module ensures automatic monitoring and sends automatic alerts in the event of an anomaly. Thanks to it, you can be sure your defibrillator is always available and ready to respond in an emergency.

•ZOLL Powerheart G5 :

The ZOLL Powerheart® G5 AED combines ease of use, reliability and advanced technologies to assist victims of sudden cardiac arrest. The AED Powerheart G5 with Intellisense™ CPR provides clear information on the quality of chest compressions. To help users act with confidence, the Powerheart G5 offers a bilingual function activated at the push of a button, as well as automatic self-tests.

Expert opinion – Didier N., Monitoring & Technical Support Manager

"ZOLL defibrillators, backed by their experience, remain a benchmark in the field of cardiac defibrillation. Rugged and reliable, they are ideally suited to rescue teams. Their CPR-D Padz and Uni Padz electrodes provide real-time feedback on resuscitation quality."

AVAILABLE WITHIN 48H

ALL OUR PARTS ARE GENUINE AND MANUFACTURER-CERTIFIED

ACCESSORIES MODEL AED+

Réf. ZA010

ADULT PAIR OF SINGLE BLOCK CRPD PADZ ELECTRODES

With compression sensor and rhythm + medical kit.
Expiry: 5 years.

Réf. ZA011

ZOLL STAT PADZ II ADULT SINGLE ELECTRODE PAIR

Expiry date: 24 months.
Specially designed for use with the ZOLL AED Plus or ZOLL AED Pro defibrillator.

Réf. ZA012

ZOLL PEDI PADZ II PAEDIATRIC ELECTRODE PAIR

Intended for patients with age at least 8 years or under 25 kg. When the pediatric electrodes are attached, the AED detects them and passes from the ECG analysis algorithm to the pediatric algorithm.
Expiry date: 24 months.

Réf. ZA020

LITHIUM BATTERIES

Pack of 10 batteries - Brand: Duracell / Procell Compatible ZOLL AED+

ACCESSORIES MODEL AED3

Réf. ZA3010

CPR UNI-PAD ADULT AND CHILD ELECTRODE PAIR

Expiry: 5 years.

Réf.

AEDTRAX – MONITORING SYSTEM

AEDTrax is a connected monitoring solution for the ZOLL AED 3. It reports the AED's status (self-tests, battery, electrodes, location) and sends alerts to ensure it is always ready for use.

Réf. ZA3020

BATTERY FOR AED 3 LITHIUM

Life: 5 years.
Battery life: 2 years maximum at 23° before installation in AED 3 to preserve the indicated service life.
Temperature: 0 to 50°.

ACCESSORIES MODEL G3

Réf. PG010

ADULT ELECTRODE PAIR

Pre-gelled, self-adhesive, disposable, non-polarized adult electrodes. Expiry date: 24 months.

Réf. PG012

PAEDIATRIC ELECTRODE PAIR

Adhesive and hypoallergenic pediatric electrodes for ZOLL G3, G3 Plus and G3 Pro defibrillators. For use with children under 8 years of age or under 25 kg. The energy level is limited to 50 joules.
Expiry date: 24 months.

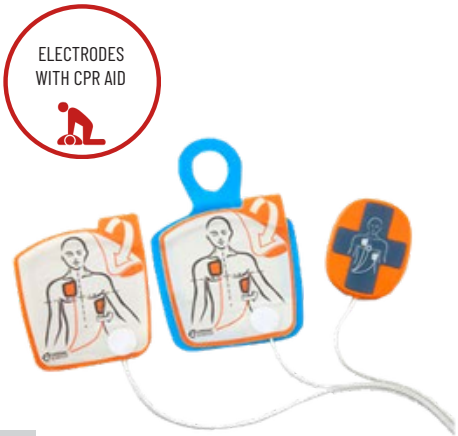

Réf. PG020

LITHIUM BATTERY FOR DEFIBRILLATOR

Yellow IntelliSense lithium battery.
Capable of delivering 300 shocks or being used over a period of 20 hours. Standby life: 5 years.

ACCESSORIES MODEL G5

Réf. PG5010

ADULT ELECTRODE PAIR

Pair of non-polarized adult electrodes with CPR assist sensor. This aid helps guide the user in the effectiveness of cardiac massage by giving feedback in real time on the effectiveness of chest compressions (in depth and rhythm).
Expiry date: 24 months.

ZOLL BRAND ACCESSORIES

- Adult and Children Electrodes
- Batteries

ACCESSORIES MODEL G5

Réf. PG5012

PAIR OF PAEDIATRIC ELECTRODES

Self-adhesive, latex-free, and limited shock-delivering pediatric electrodes to fit a child's size (50 joules). For children under 8 years of age or 25 kg.
Expiry date: 24 months.

Réf. PG5011

PAIR OF ADULTS ELECTRODES

Non-polarized electrodes use a pre-connected connector to speed up the procedure.
Expiry date: 24 months.

Réf. PG5020

BATTERY FOR DEFIBRILLATORS

Orange IntelliSense lithium battery.
Each battery can administer up to 500 shocks or 20 hours of continuous operational use.
Standby life: 4 years.

350P

Réf.QSP001

SEMI-AUTOMATIC WITH CPR VOICE ASSISTANCE 500P

Réf.QSP002

- **USER-FRIENDLY:** Clear visual and voice instructions guide the user through the entire resuscitation process, including CPR, a key link in the chain of survival.

- **SIMPLE:** Operates with one or two buttons. Equipped with a single On/Off button (and a SHOCK button on the 350P and 500P), ensuring direct and easy use.

- **DURABLE:** The HeartSine defibrillator features an IP56 protection rating, one of the highest on the market, making it highly resistant to dust and water. It is also supplied with a shockproof protective case, making it ideal for outdoor environments.

- **LIGHTWEIGHT:** It is also one of the lightest on the market, weighing less than 1.2 kg, and can be easily carried in all situations thanks to its case with a handle.

- **COST-EFFECTIVE:** Its unique PAD-PAK (electrode and battery) only needs to be replaced every 48 months, ensuring very low maintenance costs and simplified consumables management. The consumable is also very easy to replace, as it clips into the back of the defibrillator in under 2 seconds.

Forward Hearts

Thanks to the Forward Hearts program, **your consumable is replaced free of charge in the event of use.**

This program also allows survivors of sudden cardiac arrest to pass it forward and potentially save another life by donating an AED to an organization of their choice.

TRAINING MATERIALS

Réf.FPRESTAN

PRESTAN TRAINING DEFIBRILLATOR

The PRESTAN Ultra Trainer training defibrillator is an innovative and cost-effective AED. It features a one-of-a-kind sensitive electrode system: the device instantly detects when the pads are placed on the manikin, just like a real operational defibrillator.
User-friendly and durable, the PRESTAN Ultra Trainer is fully customizable (scenarios, metronome, ventilations, languages, child mode).
⚠️ Batteries not included.

Réf. FPADSG

FRED PA-1 TRAINING DEFIBRILLATOR

The Fred PA-1 trainer is designed to be used exclusively for training purposes. This training defibrillator allows to simulate the resuscitation process through 3 different scenarios. Powered by 4 standard 1.5 V batteries.

Réf. FSMARTYSAVER

SMARTY SAVER SEMI-AUTOMATIC TRAINING DEFIBRILLATOR

The **SMARTY Saver** training defibrillator meets all the requirements of a modern AED: designed to be reliable, simple and easy to use. Remote control and pair of pads included, as well as the charging cable.

Réf. FMMYPAD

RIMEDIC MY PAD TRAINING DEFIBRILLATOR

The MYPAD training defibrillator includes: a training defibrillator, electrode pads, a training cable, a rechargeable battery, a charger, and a carrying case.

Réf. SAMF01/02/03

SAMARITAN TRAINING DEFIBRILLATOR SEMI-AUTOMATIC & AUTOMATIC TRAINER

HeartSine Samaritan training system with remote control (available as a standalone item). A non-shocking training device used to train students in the use of the HeartSine Samaritan.
Voice and visual prompts identical to the operational unit.

OUR LATEST GENERATION SDNS TECH CABINET FOR DEFIBRILLATORS

Already available in more than 10 countries, SDNS cabinets are designed by SDNS Tech. SDNS Tech is the brand of D-SECURITE, a French manufacturer of innovative solutions for security of property and people.

As health is one of our priority axes, we have imagined more efficient, modern, lighter and recyclable boxes allowing an optimal protection of your medical device.

UNIVERSAL CABINETS

- Recyclable 7 times to 100%
- 4 colors available (black, grey, white and green)
- Modular : An interior can be converted into an exterior and vice versa
- Impact resistant IK06 and weather resistant IP55
- Green LED Flash day and night
- Optimal thermal insulation and waterproofing, “Rain Stop” system
- Unbreakable, flame retardant and inaletrable
- Light, therefore low carbon transport
- Manufacture in France
- Cover treated with UV protection, colourless and rot-proof

WARRANTY 5 YEARS

4 WANT TO EQUIP YOURSELF ?

OUR REGULATORY FRAMEWORK

Far beyond the many laws that govern it, occupational health has become a social and societal requirement. Developing and promoting occupational health and safety in all companies is an important mission of the prevention network.

Our training offer is based on the fundamental principles of the labor code :

Article L4121-1

"The employer shall take the necessary measures to ensure the safety and protect the physical and mental health of workers.
These measures include:

1. Occupational risk prevention actions,
2. Information and training actions,
3. The establishment of an organization and appropriate means,

"The employer shall ensure that these measures are adapted to take account of changing circumstances and with a view to improving existing situations, general obligation to inform and train"

Article R4224-16

In the absence of nurses, or when their number does not permit a permanent presence, the employer shall, after consulting the occupational physician, take the necessary measures to provide first aid to the injured and sick.

This emergency organization involves the installation of a warning system at the workplace in case of an accident or illness, the presence of rescue workers and the provision of first aid equipment.

Article R4541-8

The employer provides workers whose work involves manual handling with:

1° Information on the risks they incur when activities are not carried out in a technically correct manner, taking into account the individual risk factors defined by the order provided for in article R. 4541-6;

2° Adequate safety training for the execution of these operations. During this training, which is essentially practical in nature, workers are informed about the gestures and postures to adopt to carry out manual handling safely.

Article R. 4227-28

The article of the Labor Code obliges the employer to take the necessary measures so that any outbreak of fire can be quickly and effectively combated in the interest of rescuing workers.

Article R. 6311-15

The article of the 2007 law stipulates that any person, even a non-physician, is entitled to use an External Automated Defibrillator.

Why do a Maintenance training in the Professional Environment ?

Manual handling is a process of transporting or supporting a load, including lifting, pushing, pulling, carrying or moving, which requires the physical effort of one or more workers. If the employee is concerned, the employer must provide training to enable him to adopt good practices in ergonomics and prevention of musculoskeletal disorders (MSD).

What is the regulation regarding the use of a defibrillator ?

The regulations state that automated external defibrillators can be legally implemented by "any person", however it is preferable that users have received training to be able to handle them effectively.

What are the fire training requirements ?

Regardless of the activity of the company, all staff must be trained in:
- Raise the alarm.
- Use first aid to deal with a fire, including handling of fire extinguishers.
- Perform the various necessary maneuvers: securing the workplace, total evacuation or deferred if necessary.

Testing of equipment and practical exercises are essential to verify the efficiency of the system set up by the employer.

What is the difference between FAC and OHS?

The FAC First Aid Citizen training course aims to teach everyone basic rescue skills. It lasts at least 7 hours and is provided by authorized public bodies or national or departmental civil safety associations. The FAC does not include the professional dimension or knowledge of the risks actually present in the company.

This is why the AT-MP branch recommends OSH training, training that can be in real coherence with the risk prevention and relief organization approach deployed by the employer in his establishment.

OUR HEALTH & SAFETY TRAINING OFFERINGS AT WORK

From awareness, to regulatory training in Health and Safety at Work, discover our training offers.

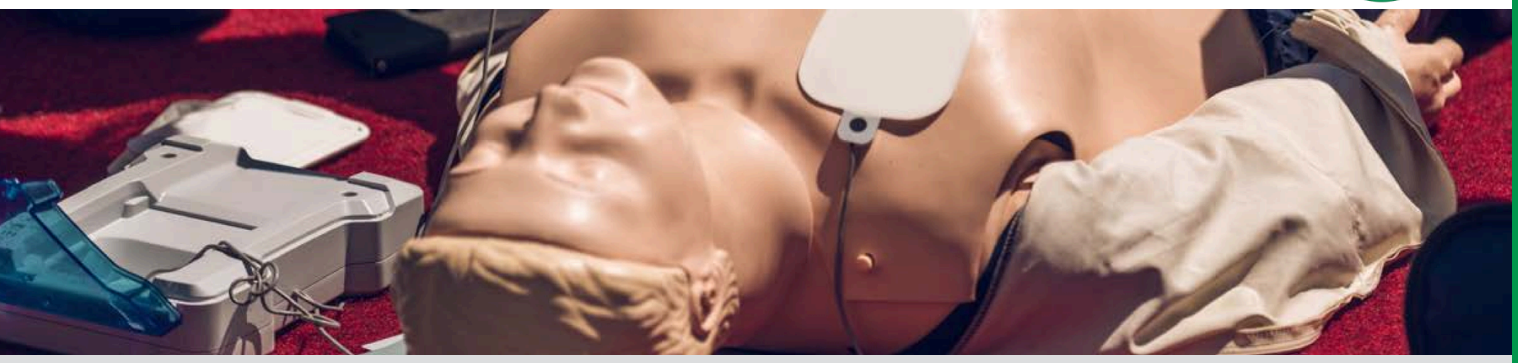

Disability Specificity

Tell us about a sensory or motor deficit of your employees, we will study together the available compensation possibilities.

Occupational safety and health (OSH)

2 days or 14 hours | **Format: Face-to-face** | **4 to 10 people maximum**

Occupational safety and health, training designed to provide relief but also essential for the prevention of risks in the workplace.

Who is this training for ?

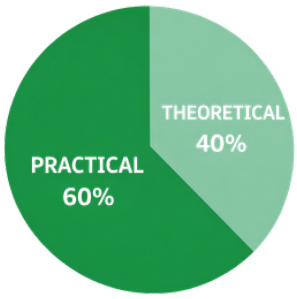

À tout salarié qui souhaite contribuer à la prévention des risques professionnels dans l'entreprise et intervenir efficacement face à une situation d'accident du travail, sans prérequis particulier.

PRISE EN CHARGE OPCO

What is this training ?

You will be able to:

- Identify hazardous situations in your organization and know who to share this information with.
- Participate in the implementation of preventive and/or protective actions.
- Know who and how to alert based on the organization of the company's emergency response.
- Mastering the conduct to hold and first aid gestures (react to heavy bleeding or choking, identify signs of malaise, use a defibrillator associated with cardiac massage...) in all age groups.

An active and participatory method based on the alternation of theoretical knowledge transmission and practical workshops.

SALES TRAINING
NO°1

Expert opinion - Ingrid C. OSH trainer
Only the skills related to emergency gestures are common to PSC and SST (the SST giving equivalence to PSC). An OSH is trained over a slightly longer period because it acquires other skills: these include knowledge of the business, skills related to the prevention of occupational risks, and skills related to the OSH action integrated into the relief organization. This is the only training of "rescuer" adapted to the company and allowing the holder of the certificate to be a real actor in improving occupational health in his company.

DISCOVER THE DETAILED PROGRAMME >>

Maintenance and updating of the skills of occupational safety and health (MUS OHS)

1 day or 7 hours | **Format : Face to face** | **4 to 10 people maximum**

Every 24 months, your employees must update their OSH skills.

Who is this training for ?

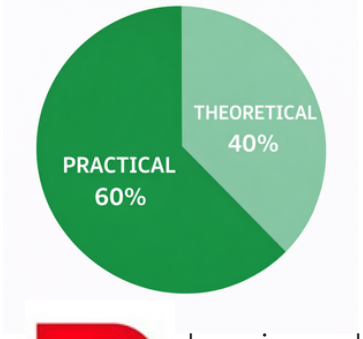

PRISE EN CHARGE OPCO

To any employee who has received initial OSH training

What is this training ?

It will update your skills :

- Feedback from your experience as a first aid worker.
- Actions that have been carried out in the risk prevention approach since your last training.
- Reminder of the legal framework for the intervention.
- Reminder of basic concepts in the prevention of occupational risks.
- Updating of emergency gestures and conduct to be held.

An educational approach to acting using your previous experience, knowledge and skills.

NEW !

Learning module for the maintenance of acquired knowledge, available at the end of 2024 on our E-LEARNING platform!

E LEARNING

Good to know : What is the deadline to complete a MAC training, beyond the validity date?
"The SST certificate is required as a prerequisite and is not specified as being "current" or "valid". Thus, an employee who was trained 3 years ago can regain his ability to practice as a OSH by only following a OSH MAC and validating the certification of his skills during this MAC. "

 DISCOVER THE DETAILED PROGRAMME >>

Initiation to Emergency Gestures (IEG)

120 minutes | **Format: Face-to-face or e-learning** | **4 to 10 people maximum (possibility of multiple groups on half day or full day)**

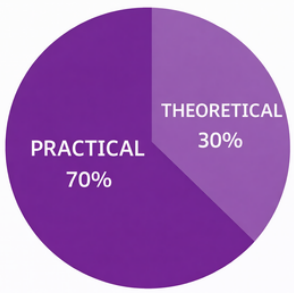

Who is this training for ?

This initiation is for the employees the first step towards a training course of rescuer from work. Training exclusively in INTRA without any particular prerequisites.

What is the training ?

You will be able to :

- Participate in the implementation of collective or individual protection actions.
- Know who and how to alert based on the organization of the company's emergency response.
- Master the conduct to be held and first aid gestures (react to heavy bleeding, loss of consciousness, use a defibrillator combined with cardiac massage and identify signs of heart malaise or stroke).

An active and participatory method based on the alternation of theoretical knowledge transmission and practical workshops :

- Gesture demonstrations and learning on training dummies and/or in pairs.

Learning module accessible on our E-LEARNING platform !

E LEARNING

Expert opinion - Didier N. Trainer/ technician
The introduction to emergency gestures is a first step in acquiring the essential first aid gestures. It allows by its duration to propose several sessions over a day and consequently sensitize a larger number of employees.

DISCOVER THE DETAILED PROGRAMME >>

Handling in the workplace(HIW)

1 day or 7 hours | Format : Face to Face | 4 to 10 people maximum

Who is this training for ?

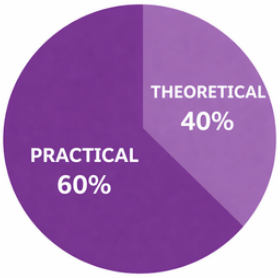

It is intended for employees whose activity involves manual handling.

Training exclusively in INTRA without any particular prerequisites.

What is the training ?

you will be able to :

- Identify issues related to work accidents and occupational diseases.
- Analyze your own work situation.
- Identify any postures in your work that may be harmful to your health.
- Implement physical safety and effort saving principles :
  -Handling alone or in pairs,
  - Mechanical aids of the structure.
- Muscle awakening and warm-up exercises.

An active and participatory method based on the alternation of theoretical knowledge transmission and practical workshops :

- Work automation acquisition exercises :
  - Dummy handling loads + equipment used on site.
- Analysis of work situations on the workstation.
- Workshops to learn the gestures and postures in compliance with the principles of physical safety and effort saving.
- Muscle awakening and warm-up exercises.

Expert opinion - Christine C. Trainer
Incorrect postures and movements can cause musculoskeletal injuries, such as back pain, tendonitis, sprains, etc. Proper training can help prevent these health issues.

 DISCOVER THE DETAILED PROGRAMME >>

Handling of fire extinguishers (MANIP)

120 minutes | **Format : Face to face** | **4 to 10 people maximum (possibility of making several groups on half day or day)**

Who is this training for ?

Regardless of the activity of the company, any employee who wishes to contribute to the prevention of occupational risks in the company must :

- Raise the alarm.
- Use first aid to deal with an early fire, including Handling of fire extinguishers.

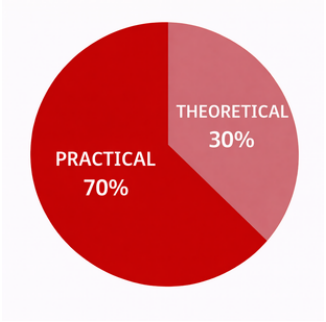

Training exclusively in INTRA without any particular prerequisites. It is possible to combine this training with the Evacuation Officer (EVAC) training.

En quoi consiste la formation ?

You will be able to :

• Master the theoretical and practical knowledge related to fire prevention and firefighting :

- Fire propagation modes, fire classes and types of extinguishers.
- The extinguishing processes and the intervention equipment of the structure.
- Use of fire extinguisher safely.

An active and participatory method based on the alternation of theoretical knowledge transmission and practical workshops :

- Setting up on ecological fire tank.
- Training extinguishers (spray water, powder and CO2).

The duration of the training depends on the equipment used. If no outdoor area is available, two options are possible: **a digital simulator with LED flames and a laser extinguisher, or virtual reality with a headset and a connected extinguisher.**

Expert opinion - Anthony S. Trainer

In the event of a fire, fire extinguishers can be a valuable tool to extinguish flames before firefighters arrive. However, it is important to know how to use them properly to avoid causing additional damage and to ensure your own safety and that of others.

According to statistics from the National Fire Protection Association (NFPA), the use of fire extinguishers has controlled about 80% of fire outbreaks in commercial and industrial buildings.

DISCOVER THE DETAILED PROGRAMME >>

Evacuation Officer (EVAC)

180 minutes | **Format : Face to face** | **4 to 10 people maximum (possibility of making several groups on half day or day)**

Who is this training for ?

Regardless of the activity of the company, any employee who wishes to contribute to the prevention of occupational risks in the company must :

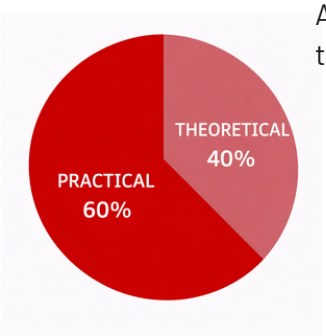

- Raise the alarm.
- Use first aid to deal with a fire outbreak.
- Ensure the safety of employees by organising evacuation.

Training exclusively in INTRA without any particular prerequisites. This training can be combined with the Fire Extinguisher Handling (MANIP) course.

What is the training ?

You will be able to :

- • Ensure the safe evacuation of all persons
  - Give general and specific fire safety instructions as evacuation personnel according to the procedure of their establishment in case of fire outbreak.
  - Know the specific characteristics of the tasks of evacuation leader, guide-file or close-line.

An active and participatory method based on the alternation of theoretical knowledge transmission and practical workshops :

- Group work
- Site visit for identification of safety devices: Emergency gas, electrical, etc...
- Recognition of escape routes, emergency exits, assembly point
- Location of fire extinguishers, IRAs,evacuation plans

NEW ! Learning module for the maintenance of acquired knowledge, available on our E-LEARNING platform!

E LEARNING

Expert opinion - David B. Trainer
Evacuation training can help improve employees' confidence and peace of mind knowing they are ready to deal with an emergency.
It can also help create a safety culture in the company.

62 **DISCOVER THE DETAILED PROGRAMME >>**

Prevention of Addictive Behaviors in the Workplace (PPAMP)

120 minutes **Format : In person** **Up to 10 people maximum**
(possibility to run 2 groups during the day)

NOUVEAU

Who is this training for?

Whatever your activity or the size of your company, "preventing addictive behaviors concerns us all."
For a healthy and safe work environment, it is essential that everyone understands the risks related to addictions.
This awareness session is open to all employees: let's inform ourselves, share, and take action together.
The goal is simple: create a safer professional environment, encourage dialogue, and offer resources for those who need them.

En quoi consiste la sensibilisation ?

Help **all your employees and the management/supervisory team better understand addiction:**

- Social perceptions: taboo, normalization, stigma, the "bon vivant / party person" image, how products have evolved, etc.
- Addiction, excess, disorder, dependence, abuse...: when does the illness begin?
- The different psychoactive substances
- Social perception of substances: from occasional use to normalization
- Legal/illegal substances in the workplace
- Different types of use and their consequences: financial, health, work

An active, participatory approach based on:

- Discussions and sharing of experiences (real-life situations, Q&A)

Good to know – Preventing addiction in the workplace

The employer has an obligation to prevent occupational risks, including those linked to the consumption of psychoactive substances (alcohol, drugs, medication).
This prevention aims to protect employees' health and safety, as well as the smooth running of the company. Awareness actions, clear rules (internal regulations), and a supportive dialogue help reduce risks. In the event of difficulty, employees should be able to access confidential support (occupational health services, HR, specialist support services).

Expert opinion

"Preventing addictive behaviors at work is based on a simple principle: identify, understand, and act at the right time —without judgment. By improving shared vigilance and the right reflexes in risky situations, teams gain in safety, peace of mind... and day-to-day effectiveness."

DISCOVER THE DETAILED PROGRAM >>

Training in partnership with KOROS

Managing Risks Related to the Use of Psychoactive Substances (alcohol, illicit drugs & non-prescribed medication)(MCPP)

7 hours | Format : In-person | 5 to 12 participants maximum

NOUVEAU

Who is this training for?

Act with care and ensure safety at work.
Addressing addictions in the workplace—whether related to alcohol, medication, or illicit drugs—is often complex for a manager. Yet prevention is a key lever for everyone's health and safety.
This 7-hour training course, led by a patient expert, gives you the tools to turn a taboo topic into constructive dialogue.
You will learn how to identify early warning signs, adopt the right managerial posture—balancing firmness and empathy—and respond appropriately to risk situations.
Target audience: Managers, HR, QHSE teams, members of the CDDIR or the CSE.

What does the training involve?

You will be able to :

- Understand what addiction is and its impact in the workplace.
- Identify warning signs and at-risk situations (alcohol, medication, illicit drugs).
- Know the legal framework and company rules (prevention, internal regulations, responsibilities).
- Address the topic with the right posture: firm, factual, and compassionate.
- Respond to an impaired state situation: secure the environment, manage the emergency, and apply the procedure.
- Conduct an appropriate discussion/interview and refer to internal/external support resources.
- Implement a screening/testing approach (alcohol & illicit drugs): organization, administration, and interpretation of results.
- Know how to act after a positive test or a refusal, while respecting the framework defined by the company.

An active, participatory method based on:

- Discovery: case studies, photolangage.
- Learning: discussions and experience sharing, role plays...

"Training qualifying participants to conduct alcohol & drug screening/testing (subject to authorization in the Internal Regulations)."

Expert opinion

As a manager, your role is not to "diagnose," but to prevent, identify, act, and refer—with the right posture. This training provides a clear framework (legal + procedures), practical tools (interviews, crisis management, shared vigilance), and the right reflexes to keep your teams safe—while maintaining firm, factual, and compassionate communication.

DISCOVER THE DETAILED PROGRAM >>

Training in partnership with KOROS

Mental Health First Aid (PSSM)

14 hours **Format : In-person** **8 to 16 participants maximum**
(in-house training only – at your premises)

NOUVEAU

TRAININGS

Who is this training for?

"Because mental health is everyone's business."
In a constantly changing professional world, knowing how to identify and respond to psychological distress is a skill as vital as physical first aid.
Train your teams to create a supportive and safe work environment.
Whatever your company's activity, this training is aimed at volunteer employees from any sector who want to better understand mental health and know how to respond in a difficult situation or a crisis.
Unlike traditional first aid, PSSM training prepares participants to intervene with someone experiencing a mental health condition or a crisis phase. It helps break taboos and take concrete action before a situation worsens.

What does the training involve ?

You will be able to:

- Understand the key concepts of mental health and effective interventions
- Feel confident interacting with someone experiencing a mental health issue or in crisis
- Revisit your perceptions of mental health (stereotypes, misconceptions, helping posture)
- Strengthen the support provided to people in crisis or difficulty, using a structured framework and action plan

An active, participatory approach based on:
Discussions and experience sharing to:

- Build confidence interacting with people experiencing a mental health issue or a mental health crisis
- Revisit perceptions of mental health
- Strengthen support for people in crisis or experiencing a mental health issue

Expert opinion
In the workplace, a mental health difficulty can show up as reduced concentration, isolation, irritability, or a change in behavior. Most often, it's not "a lack of willpower," but a signal that needs to be recognized. PSSM training provides a clear framework and simple tools to listen without judgment, reassure, guide people to the right resources, and act in a crisis. It's a valuable skill to strengthen prevention, team cohesion, and everyday safety.

DISCOVER THE DETAILED PROGRAM >>

Training in partnership with KOROS

Workplace First Aid Trainer (FO SST)

56 hours (8 days) **Format: In-person** **5 to 10 participants maximum**

NOUVEAU

Who is this training for?

This training is aimed at employees of a company or establishment, as well as any professional working either as an employee or as an external trainer for a training organization.
The SST trainer contributes to the implementation of the company's prevention approach by preparing and facilitating SST training sessions, and by monitoring SST within the company during skills maintenance and refresher sessions (MAC).

Prerequisites:

- Hold a valid SST certificate or APS SST certificate (still valid)
- Demonstrate acquisition of basic skills in occupational risk prevention (self-training online INRS e-010001 or training delivered by Carsat/Cramif/CGSS)
- Recommended IT skills (basic "presentation" slide creation and text processing)
- Have strong communication, facilitation, and presentation skills

What does the training involve?

You will be able to:

- Design, organize, facilitate, and assess workplace first aid training actions.
- Demonstrate the company's interest in the SST program for the organization.
- Master methodological and technical aspects of prevention and first aid to integrate a training project.
- Build a training pathway: "SST Trainer", adapted to an adult audience and to the risks specific to the establishment.
- Use different methods for assessing knowledge and skills.
- Ensure the administrative follow-up of the training via the FORPREV tool.

Teaching methods & tools
An alternating, hands-on approach combining theoretical input, demonstrations, group work, case studies, role plays, and use of INRS materials and SST simulation equipment (manikins, AED, injury make-up, etc.)

Expert opinion
Training SST staff means passing on life-saving skills—but above all, building a prevention culture. The SST trainer becomes a key player in the company: they structure learning, secure hands-on practice, and keep the approach sustainable thanks to INRS and MAC refresher sessions. This training provides a clear method for designing, delivering, and assessing effectively, while remaining aligned with the framework and certification requirements.

66 **DISCOVER THE DETAILED PROGRAM >>**

Maintaining & Updating SST Trainer Skills (MAC FO SST)

21 hours (3 consecutive days) **Format: In-person** **5 to 10 participants maximum**

NOUVEAU

TRAININGS

Who is this training for?

This training is intended for all SST trainers (employees of a company/establishment or employees/service providers of a training organization) who wish to maintain and update their skills.
Objectives:

- Strengthen the trainer posture (listening, communication, facilitation, adaptability) and share best practices.
- Update regulatory and technical knowledge in prevention and first aid.
- Design and facilitate sessions in line with the SST referential, using methods adapted to different audiences.
- Assess skills according to INRS criteria.
- Use the FORPREV software to declare, manage, and monitor an SST/MAC SST session.

Prerequisite: hold a valid SST Trainer certificate.

What does the training involve?

You will be able to:

- Maintain and develop your teaching, technical, and organizational skills to continue designing, facilitating, and assessing SST training.
- Integrate regulatory developments and best practices in prevention and first aid.
- Structure training sequences (objectives, delivery, facilitation) and strengthen your assessment practices (formative and certifying).

Teaching methods & tools

- Alternating teaching approach: demonstrations and practical application exercises
- SST simulation equipment: manikins, AED, injury make-up, etc.
- Visual aids: computer / projector, quizzes, teaching tools
- Tools & resources: INRS plans, reference documents, trainer manual, Tutoprev
- References: Légifrance / INRS / CARSAT

Expert opinion
Training SST staff means passing on life-saving skills—but above all, building a prevention culture. The SST trainer is a key link within the company: they structure learning, secure hands-on practice, and ensure the approach lasts over time through SST and MAC sessions. This course provides a clear method for designing, delivering, and assessing effectively, while staying aligned with the framework and certification requirements.

OUR PARTNERSHIPS

SHORT, INNOVATIVE, MEMORABLE FORMATS

With our partners, we develop a complementary offering to provide prevention actions that are more dynamic, more immersive, and easier to roll out in companies.

Why rely on partners?

- Offer short formats tailored to operational constraints
- Strengthen engagement through immersive and participatory approaches
- Complement our expertise with specialized solutions (mental health, addictions, etc.)
- Create "event-style" actions: Safety Day, multi-workshop awareness sessions, etc.

Our partners

d'un seul geste

A partner specialized in virtual reality applied to prevention.

An immersive and educational approach to embed the right reflexes, encourage role-play situations, and enhance the impact of awareness sessions in companies.

Perfect for:
pop-up/touring workshops, short formats, prevention events (Safety Day, etc.), multi-workshop sessions.

KOROS

A partner specialized in mental health and preventing addictive behaviors in the workplace.

Training courses offered:

- Preventing addictive behaviors in the workplace (PPAMP)
- Mental Health First Aid (PSSM)
- Management: reducing risks related to the use of psychoactive substances (alcohol, illicit drugs & non-prescribed medication)

What this changes for your teams

- More engaging sessions that are easier to follow
- A concrete approach focused on reflexes and practice
- Formats adaptable to your needs (groups, touring workshops, internal events)
- Effective awareness without disrupting operations

GOOD TO KNOW

OPCO FUNDED

There are a multitude of schemes to finance vocational training.

In France, 11 Competence Operators (OPCO) bringing together 329 professional branches.
Find your OPCO, and you can finance your training.
Send your quotation and the training program followed to your OPCO and ask for its Take-over.

When your application is forwarded, the amount granted will be communicated to you as follows a file number for your pick-up.

IDENTIFY YOUR OPCO >>

THE PREVENTION PASSPORT

Information:
The Prevention Passport is a new service designed to improve risk prevention in occupational health and safety. Its purpose is to connect workers, employers, and training organizations in order to ensure the traceability of training related to the prevention of occupational risks and to make it easier to manage.

The Prevention Passport is now open to training organizations.
From 1 September 2025, training organizations will be required to enter Health & Safety training courses on NET-ENTREPRISES.

Your steps:
To record training sessions on the digital portal, employers must provide training organizations with:

- The SIRET number of the employer and trainees
- The NIR* (French Social Security number) as well as the birth name (Regulatory provisions allow us to collect trainees' NIR – Decree No. 2023-1073 of 20 November 2023).

OUR E-LEARNING PLATFORM

FROM €1 / MONTH / USER

E LEARNING

We offer you to discover short modules on fire, the use of a defibrillator or on the first few courses through our e-learning platform.

You can log in at any time to our platform, it is accessible 24/24 and 7/7, for the duration of your engagement of 6, 9, 12 months and more. We recommend that you only follow our modules during working hours or when the employer has made a waiver.

Platform available on any device

Games and educational videos

Downloadable synthesis documents

GOOD TO KNOW

Once your training is complete, the platform remains accessible to review your training for the duration of your engagement!

WATCH THE VIDEO PRESENTATION >>

Comment ça marche ?

Bring your computer, tablet or smartphone and make sure you have an internet connection. To access it, enter the email address you have provided us and the password received.

Every week, you will receive an email to inform you of your follow-up. The chapters are associated with tests (questionnaires, quizzes, educational games) for the evaluation and measurement of progress made as you learn.

You complete your training course by evaluating yourself: a summary questionnaire will be offered to you. Answer the questions and see your results.

If you pass 70%, you will validate your module and then you can download your certificate and the appendices. Conversely, you can review the chapters and try your luck again in the quiz!

Dashboard Tracking

SAFETY DAY

What is a safety day ?

Prevention rather than cure. World Safety and Health Day reminds us of the importance for employers to anchor this adage in their employees' daily tasks.

Through this event, the company's mission is to **guarantee health and safety at work with a unique training program.**

This is adapted to the needs and specific features of each company and sector.

To ensure success, training is provided by expert trainers. It can be focused on a variety of topics :

- **Fire safety :** Handling a fire extinguisher,
- **First aid :** Management of cardiac arrest with the use of a defibrillator, First aid information on how to act in the face of a specific risk of accident...

Recommended duration: 30 to 60 minutes. Several formulas are possible, and tailored for each company. A maximum of 10 participants per workshop is preferred to keep the site user friendly and convenient. This day is informative, without certificate issuance.

You have another training project, we are listening to your needs ...

- Support in drafting or updating the Single Document for Occupational Risk Assessment (DUERP)
- Evacuation drill
- Introduction to emergency first-aid gestures — tailor-made module
- Psychosocial risks
- Addiction awareness
- Mental Health First Aid

OUR SUPPORT

Demonstration of your defibrillator (INF001)

20 minutes
Format : In person or e-learning

10 people maximum (possibility of several groups on half day or day)

9 out of 10 French know what a defibrillator is, but do not want to use it for fear of doing wrong, our technicians offer you a demonstration of the use of your device.

Who is this module for ?

All employees of the structure, without any particular prerequisites

What is the module ?

When installing and commissioning your device, our technician will present :

- The situation that requires its use
- The device and its accessories
- The modalities of return to service after its use

Learning module accessible on our E-LEARNING platform!

E LEARNING

Expert opinion - Ingrid CHUDY, Head of the training division

"Our experienced technicians will explain how to use your device, an additional asset to eliminate all concerns when using it!"

DISCOVER THE DETAILED PROGRAMME >>

Awareness of the Use of the Defibrillator (AUD)

60 minutes
Format : In person or e-learning

10 people maximum (possibility of several groups on half day or day)

When commissioning your device, its maintenance or to allow your employees to be reassured about the use of the device, our technician offers you a demonstration of the use of your device.

Who is this module for ?

All the employees of the structure, without any particular prerequisites.

What is the module ?

Our technician will present on a training dummy :

- Signs of cardiac arrest
- What to do: Alert, Massage, Debride
- The device and its accessories
- The modalities of return to service after its use

Learning module accessible on our E-LEARNING platform!

OSH TRAINER PACK

BEST SELLER

We offer our OSH trainer pack to accompany you in your training. The training of work rescuers requires, both for initial training and for MAC, the use of specific teaching material that you will find in our offer.

Our pack is composed of * :

1.Makeup Kit, Net Wounds and Simulation Equipment.

2.Tourniquet Garrot.

3.Head cut.

4. Pack of 3 PRESTAN Adult-Infant Family with frequency monitor, including 10 airway per manikin.
- Set of 50 face protectors with filter per Adult, child and infant model.
- Soft bag with handles.
- A soft pack of disinfectant wipes.

5.Prestan training defibrillator, fully automatic or semi-automatic, available in the OSH training pack or sold individually.

6.HEIMLICH vest, ideal for learning how to unclog the airways in case of choking.

7.Foldable floor mat (x2).

ALL OF THESE ITEMS ARE ALSO AVAILABLE FOR INDIVIDUAL PURCHASE.

OUR OTHER TRAINING ACCESSORIES

Prestan female manikin with CPR feedback system, including 10 airway inserts. Soft carry bag with handles.

The emergency blanket helps maintain body heat and provides protection from the sun. It also protects against rain and wind.

Compact haemostatic dressing featuring an absorbent foam pad and an effective compress to quickly control bleeding.

Fluorescent yellow evacuation cuff with the inscription 'GUIDE FILE'/ SERRE-FILE / ÉVACUATION. It allows to easily identify the role of the person in the evacuation procedure. This blade brassard is quick to install thanks to its self-tightening fixation.

OUR BUSINESSES

MECHANICAL SMOKE RELEASE

Mechanical smoke extraction is crucial to effectively evacuate smoke and heat in the event of a fire. Our teams are autonomous on the handling of fire safety systems in preventive and corrective maintenance.

FIRE EXTINGUISHERS & FIRE HOSE REEL

D-Sécurité Incendie & R2P2i also install and maintain your permanent-pressure or auxiliary-pressure fire extinguishers.
We carry out installations and additional installations, as well as the appropriate signage.
We work with certified equipment.

FIRE COMPARTMENTATION

Delay and prevent the spread of fire! We are experts in compartmentalization for 20 years : preventive and corrective maintenance.This mainly covers two areas: fire doors and fire dampers.

TRAINING

Awareness of fire risk and appropriate safety measures can help reduce damage in an emergency: OSH training, evacuation, handling of extinguishers.

NATURAL SMOKE RELEASE

We carry out preventive and corrective maintenance for smoke extraction systems.
Regular inspections are essential to ensure that smoke extraction systems continue to meet current safety standards.

ALARM & FIRE DETECTION

From the installation to the maintenance of the fire detection system in your establishment !
Protect your building with alarms and fire detection against hazards and incidents (type 4,3,2B and FSS).

EVACUATION PLAN & EMERGENCY LIGHTING

We provide the installation and preventive and corrective maintenance of your emergency lighting systems, to ensure the reliability and safety of your installations.

We also specialize in producing evacuation plans and fire brigade intervention plans, as well as supplying fire protection solutions—whether for fire extinguishers, smoke extraction systems, or evacuation.

We are at your disposal for the **study, installation and maintenance** of your fire safety systems.

TRAIN YOUR EMPLOYEES IN FIRE RISK!

Discover our training on www.d-securite-formation.com

Our strength lies in our responsiveness, professionalism and complementarity of our offers, ensuring total control of the protection of assets and individuals through D-Sécurité Groupe.

We carry out the installations from A to Z: from the implementation and compliance study to the completion of the SSI file with plans. We visit each site to offer you the best advice.

OPERATIONAL SECTORS

We operate in all types of sectors:

- Public receiving Establishments (PRA) :
Health institutions, shops, airports
and train stations.

- Establishments receiving workers (ERT) :
Industrial, logistic, tertiary,...

OUR MANUFACTURERS & PARTNERS

We are proud to work closely with three outstanding partners who contribute to the quality and diversity of our products and services.

At D-Sécurité Incendie and R2P2i, we firmly believe in the importance of strong, long-lasting relationships, and our partnerships with France's leading brands are a perfect illustration of this.

As an official and authorized distributor, we have established privileged links with each of our partners, which allows us to guarantee our customers the highest quality products and services.

Find our manufacturers in our showroom in Genas.

EXAMPLES OF INSTALLATIONS :

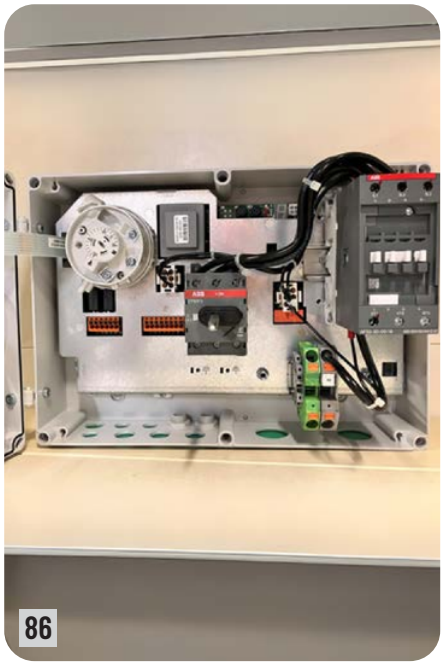

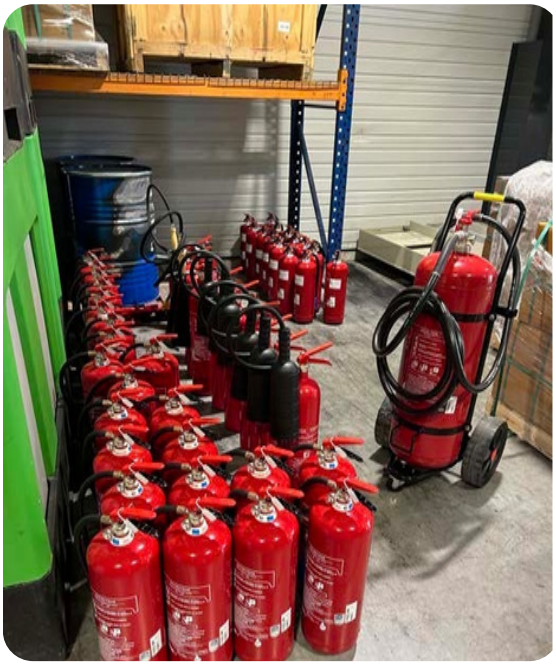

F.A.Q.

1

HOW MANY EMISSIONS OF CARBON DIOXIDE EMISSIONS FROM SMALL AND MEDIUM-SIZED ENTERPRISES ?

Cartridges are valid as long as they remain within the charge tolerance. However, it is advisable to replace them at the tenth year.

2

HOW LONG CAN I KEEP MY SMOKE DETECTORS ?

Smoke detectors do not have a specific shelf life, but NFS 61-933 indicates that the reconditioning of the detector is to be done according to manufacturers' recommendations, usually every four years.

3

IS FIRE TRAINING MANDATORY ?

Fire training is mandatory in the company or PRA.

4

WHAT IS A BAES ?

The BAES, or Autonomous Safety Lighting Unit, is an essential device to ensure the safety of persons in case of fire or any other emergency situation resulting in a power failure

5

WHAT NATURAL SMOKE MEANS ?

It is carried out by natural air inlets and smoke-extraction systems, communicating with the outside either directly or through ducts.

Did you know?

An intumescent seal expands depending on its material—by 5 to 11 times its thickness! Installing a glazed vision panel is mandatory when the fire door is double-acting (swings both ways).

Expert opinion - Yann BESSON, Procurement Manager

«All businesses and communities must have first aid equipment available. We offer a complete and adapted range for both the WSE and occupational health nurse.»

Retrouvez l'ensemble de nos produits
sur www.fournitures-medicales.com

F.A.Q.

1 IS A PHARMACY CABINET MANDATORY ?

According to the Labour Code (article 4224-16), each company must be ready to provide first aid to injured and sick in the absence of nurses, with measures adapted to risks.

2 THE PROFESSIONAL PHARMACY CABINET, WHAT DOES THE LAW SAY ?

In France, the installation of a medicine cabinet in a company is a legal obligation, according to article R4224-14 of the French Labour Code.

3 WHAT EQUIPMENT IS REQUIRED ?

According to the Labour Code, your workplace must have first aid equipment that is risk-appropriate, easily accessible and signposted. Each company must be equipped with a first aid kit or medicine cabinet adapted to its characteristics and number of employees.

4 WHAT ARE THE STANDARDS OF HYGIENE AT WORK ?

According to the Labour Code, the employer must provide adequate sanitary facilities (changing rooms, washbasins, toilets) with a daily cleaning obligation, and ensure good ventilation of the premises for a healthy working environment

5 IS FIRST AID TRAINING MANDATORY ?

In accordance with article R4224-15 of the labour code, an employee must undergo first aid training to be able to administer first aid in case of emergency at workplaces where hazardous activities are carried out, as well as on yards employing 20 workers for more than 15 days.

SUMMARY

1 WALL AND FLOOR AIR PURIFIER

2 CEILING AIR PURIFIER

3 CO2 SENSORS

4 MAINTENANCE

HOW TO CHOOSE YOUR PURIFIER ?

Based on the **recommendations of INRS** (National Institute for Research and Safety), **ANSES** (National Agency for Health Security in Food, Environment and Work) and **HCSP** (High Council of Public Health) we can identify several elements regarding the wise choice of an air purifier :

1

Only use professional-grade air purifiers, not home/office mixed products.

2

Ensure that the device is equipped with HEPA filters minimum H13, certified according to EN1822.

3

Avoid devices that use physico-chemical treatments with unknown long term effects.

4

The noise level must be below 60 dB in normal operation to avoid disturbance.

5

The air flow should be 3 to 5 times the air renewal per hour (ACH).

6

Position the purifier at a height to maximize its effectiveness on the respiratory area.

7

Choose certified devices 99.99% efficient against COVID-19 and coronavirus.

8

Select Energy Star certified models for their fuel efficiency.

9

Make sure the air purifier has a minimum 3 year warranty.

10

Choose a certified service provider that provides regular maintenance and disinfection of devices on site.

WALL AND FLOOR AIR PURIFIERS

CERTIFIED EFFECTIVE AGAINST COVID-19

HEPA 13 FILTRATION RECOMMENDED BY INRS

OFFERED

10 LABORATORY CERTIFICATES

Réf. AM1

PURIFIER FOR VERY SMALL SPACES

For small rooms or individual offices, the AERAMAX DX range offers ready-to-use products using a complete automatic filtration system including activated carbon filtration, Antimicrobial treated HEPA filter and PlasmaTRUE ionization technology.

The AERAMAX DX5 purifier effectively and quietly purifies the air in rooms from 8 to 18 m2 (AHAM certification: the air is purified 5 times in one hour). It is equipped with an AeraSmart sensor that will monitor the air quality and automatically adjust the fan speed to keep the air clean and healthy. It also has an AeraSafe antimicrobial treatment that reduces the growth of bacteria, mold and fungi on the HEPAfilter.

- Purified surface : 8 to 18 m^2
- Dimensions (en mm) : H 700 x W 180 x P214
- Weight : 4,6 kg
- Air flow rate (m3/h) : 32, 59, 93

AIR PURIFIER 3 YEAR WARRANTY

Particularly effective against odours and VOCs.
Use mainly when treating viruses, and germs is not a priority.

Réf. AER A25.1

Pre-filter for model S
Pre-filters capture large particles like dust and hair, allowing the charcoal filters to work effectively.

Réf. AER A10

Pre-filter for model M and L.
Ideal for capturing and filtering large particles such as dust and hair.
Sold in packs of 4.

CO^2 SENSORS

Réf. CAPT22

CLASS'AIR CO2 SENSOR

The Class'Air CO2 sensor is a teaching device for measuring indoor air quality.

The Class'Air analyzer allows you to check at a glance the quality of the surrounding indoor air thanks to its high-precision CO2 sensor (NDIR technology) that allows the display with a resolution of 1 ppm. The lighting of the LEDs allows alerting and raising awareness of the ventilation of rooms according to the CO 2 rate. In addition to CO 2 detection, Class'Air also provides information on temperature, humidity and pressure while maintaining a 1-year autonomy.

- Dimensions : 93.7x103x36.6mm
- Weight : 175g
- Autonomy : 12 months
- Hook for hanging or base for wall mounting of the sensor or "placed" on a desk
- Class'Air software
- Measured parameters: Carbon dioxide (CO 2) - Temperature - Humidity - Pressure
- Configurable measurement period: 1 point averaged over 10 minutes by default
- Datalogger recorder option (Ref: CAPT23)

CO^2 SENSORS EASY CAPT

Réf. CAPTAERO

Measures carbon dioxide (CO^2)

Dimension (mm) 105 x 105 x 30 Weight : 120g

Life: 15 years Mains power

EASY CAPT measures the CO2 level and continuously monitors air quality to visually alert occupants when it's time to ventilate to renew indoor air.

EASY CAPT is a robust, fully sealed and unbreakable product, specifically designed to adapt to the requirements of all Public Establishments.

No maintenance required and no risk of measurement drift over time. EASY CAPT integrates an automatic re-calibration function of its CO 2 probe. A manual calibration of the CO2 sensor is also possible.

THE + PRODUCTS:

- NDIR CO2 sensor with performance validated by an independent COFRAC laboratory
- Continuous CO2 measurement (every second) without data retrieval, no datalogger option
- Permanent or flashing LED indicator for view the CO 2 level
- Anti-theft attachment
- Quick and easy installation
- No maintenance required

SMART AIR measures the level of CO2 and continuously monitors the air quality to visually alert occupants when it is time to ventilate for indoor air renewal.

With its temperature and humidity sensors, SMART AIR also analyses the building's ambient parameters. SMART AIR integrates the iZiAiR air quality and hygrothermal comfort algorithm to more easily study each indoor environment and identify possible improvements. Thanks to its wireless communication module, data is accessible remotely, simply from a smartphone or computer screen.

Measures carbon dioxide (CO^2), temperature and humidity

Dimension (mm) 105 x 105 x 30 Weight : 120g

Battery life: 10 years Integrated lithium battery power supply

THE + PRODUCTS:

- NDIR CO2 sensor with performance validated by an independent COFRAC laboratory
- LED indicator to see the CO 2 level
- Lithium batteries 10 years: no repeat battery change, no electrical connection required
- Robust product completely sealed and unbreakable
- Wall mount anti-theft attachment
- Quick and easy installation
- No maintenance required
- Data recovery with the optional IZIair smartphone app
- Datalogger option

WE ANALYZE YOUR AIR QUALITY

AIR QUALITY DIAGNOSIS

WHAT IS THE PURPOSE OF AN AIR DIAGNOSIS ?

Indoor air quality diagnosis is a study conducted to assess the quality of indoor air. The process consists in measuring the level of pollution within the studied environment.

REFUNDED FOR THE PURCHASE OF 2 PACKS

WHAT DOES IT MEASURE ?

Indoor air quality diagnostics will measure the purity of indoor air particles with six different channels of 0.3 to 10 µm size simultaneously. It will also be able to analyze climate data such as air temperature, relative humidity, dew temperature and wet temperature.

RECYC'R uses a portable environmental measuring device suitable for the quantitative detection of E (PM10) and A (PM2.5) dust concentrations in air. The device directly displays the particulate mass in micrograms per square metre as a mass fraction of air. This laser particle counter is compliant with ISO-21501-4.

Submission of a complete report with observation, analysis and recommendations (30 pages)

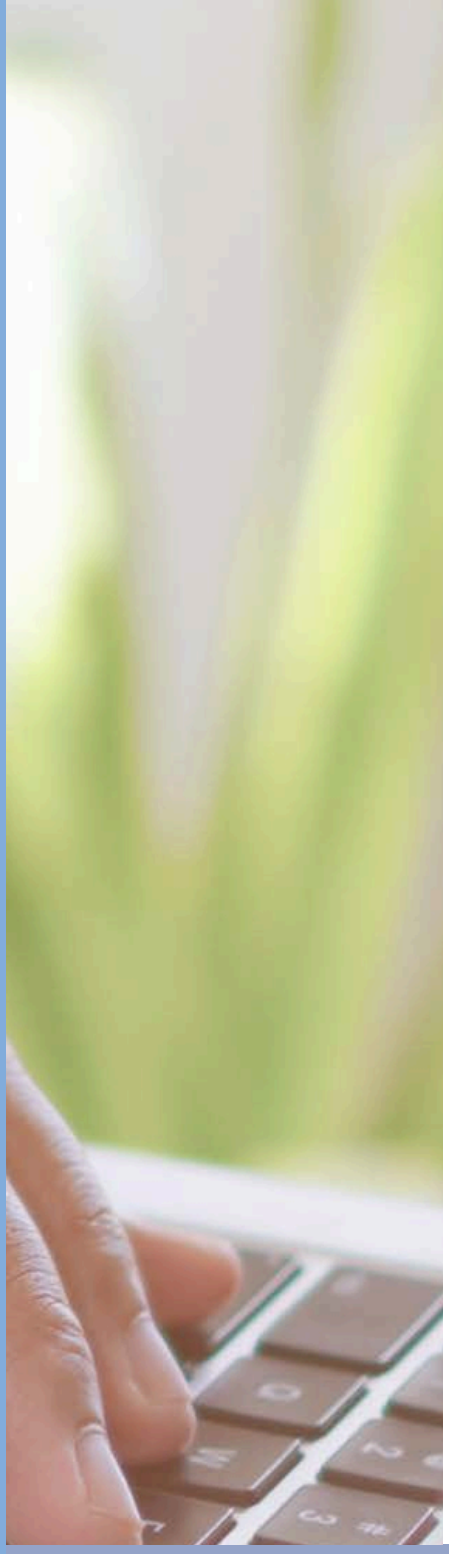

INDOOR AIR QUALITY CONTEXT

The Grenelle 2 law made it mandatory to monitor indoor air quality in certain establishments receiving a sensitive public (articles L. 221-8 and R. 221-30 et seq.) of the environmental code. The institutions concerned are those that accommodate children :

- Collective care facilities for children under 6 (crèches, daycare centres...) since the 01/01/2018;
- Education or vocational training institutions of the first and second degrees (nursery and elementary schools since 01/01/2018, middle and high schools until 01/01/2020).

We conduct indoor air quality audits in professional establishments, individual dwellings or public places.

ORDER YOUR AUDIT >>

MAINTENANCE
WHAT THE LAW SAYS

Air quality monitoring is changing in several establishments

Since January 1, 2023, your facility has been subject to new monitoring procedures regarding indoor air quality.

Decree no. 2022-1690 of 27 December 2022 amending the Decree no. 2012-14 of 5 January 2012 on the evaluation of ventilation means and measurement of pollutants carried out for the purpose of monitoring the quality of indoor air of certain establishments receiving the public.

As a result of the health crisis and various lessons learned, air quality monitoring will be modified from 1 January 2023 in the following* :

- Collective care facilities for children under six years of age,
- Recreational reception facilities,
- Public or private first and second level vocational education or training establishments.

*Covered physical and sports facilities where sport, swimming or swimming activities are performed are no longer included in the IAQ monitoring system. These premises are considered as specific pollution premises by the labour code and must comply with the requirements for ventilation and sanitation defined in this regulation

We perform the maintenance of your air purifiers.
This includes :

- A functional explanation
- Cleaning the product
- Product disinfection
- Filter change (filters are purchased at extra cost)
- Taking charge of filter recycling.

WE INSTALL OVER 1,100 AIR PURIFIERS PER YEAR.
A COMPLETE RANGE AND A LARGE STOCK AVAILABLE WITHIN 24 HOURS.

IAQ MONITORING IMPLEMENTATION TIMELINE (INDOOR AIR QUALITY)

January 1, 2023
Date d'entrée en vigueur

At a key milestone
Campaign to measure regulated pollutants to be carried out

No later than December 31, 2024
First annual evaluation of ventilation/aeration means to be carried out

No later than December 31, 2026
First self-assessment and first action plan to be carried out
